

YOU CALL IT A MAP.

OKAY, FOLKS. HERE'S WHAT YOU'RE LOOKING AT.

There are dairymen in every milk shed that have reduced dip usage by more than 50% by switching to a Thrifty Dipper product. It performs no matter where you dairy.

5,000-cow Nevada dairy cut dip usage 50% 3 years ago with the Original Thrifty Dipper. With the T150 Pro Foamer, they are now saving 75% more!!!

"We recently switched to the T150 Pro Foamer and cut dip usage by 75% over our current level. It is really easy to use and the foam provides the best coverage we've seen!"

Chad Turner
Desert Hills Dairy,
Yerington, NV (Milking 5,000 cows)

MAP.

WE CALL IT A PROVING GROUND.

200-cow Minnesota dairy reduces dip usage by over 60%

"We milk 200 cows and we wouldn't be without the Foamer. We were going through 55 gallons of dip every 6 weeks. Since we started using the Thrifty Dipper back in April, we are only using 15 gallons every month. It is hands down the best dipper on the market. Going without the dipper would be like your well running dry or your electricity going out."

Pat Lingen
Edgerton, MN
Lingen Dairy (Milking 500 cows)

3,200-cow Wisconsin dairy goes from 35.2 gallons of pre-dip daily to 13.9 gallons

"I've been in the milk equipment business for 21 years, and the T150 Pro Foamer is the most durable/robust foamer we've seen. All the claims you see in the ads about teat dip reduction, great teat coverage, and efficacy are true. We've been selling these systems for 7 months now and we've seen the savings repeatedly. Just recently we had a dairy we work with that was using 35.2 gallons of pre-dip per day. With the T150 Foamer their teat dip dropped to 13.9 gallons (61% less dip)."

Randy Beuchel
Chilton, WI
Milk Harvest Manager, LDS Inc. (Milking 3,200 cows)

225-cow Ontario dairy farm reduces dip usage by over 70%

"We began using the Thrifty Dipper almost 3 years ago. We immediately noticed the dip savings. We had been using 55 gallons about every 3 months and now that same amount lasts us more than 11 months. Our SCC counts have remained the same or improved. This product has paid for itself many times over."

"The biggest benefit is that it covers the teats so well!"

"We've had the Original Thrifty Dipper for a couple years and saved about 50% in dip costs. About 6 months ago we switched to the T150 Pro Foamer. We've saved even more dip, but the biggest thing is that it covers the teats so well. The foam sticks to the cows better for some reason. The cows are cleaner and healthier (mastitis is down)."

Andy Gilbert
Potsdam, NY
Adon Farms (Milking 1,250 cows)

Better coverage with less than half the dip

"Before we put in the T150 Pro Foamer 6 months ago, we were spraying. The spray only covered one side of the teats. The T150 has given us 100% coverage and has cut our dip usage by more than 50%. Our SCC counts have stayed (around 130,000)."

Kimball Holt
Newcastle, UT
Holt Dairy (Milking 3,300 cows)

"The cows are cleaner and our prep time is faster"

"We've been using the Original Thrifty Dipper for many years. Dennis wouldn't stop bothering me about one of his new products he wanted us to try and so finally I caved in and bought the JAH glove system for our pre-dip. We're happy with the change. The cows are cleaner and our prep time is faster. We also use substantially less dip now than we used to."

Steve Gerratt
Declo, ID
Midway Dairy (Milking 3,500 cows)

"It's the only thing I bought last year that made me any money!"

"We started using the Thrifty Dipper products 3 years ago. They were more expensive, but we felt the cost was justified (due to dip savings - over 50%). We certainly like the coverage of the products. They transitioned well into the barn. When we started using the T150 Foamer last year, we were blown away at the way it conserves the teat dip. We've seen savings north of 50%. We use it on both of our dairies for pre- and post-dip. I don't know why it is such a well-kept secret. If a dairyman was spraying, their savings would be even more dramatic. I've told several dairymen that they needed to get the T150 Pro Foamer in their barns and they're all happy with it. It's the only thing I bought last year that made me any money."

1,400-cow Wisconsin dairy upgrades to the T150 Pro Foamer and cuts dip usage by 50%

"We started using the T-150 Pro Foamer at our 1,400-cow dairy a month and a half ago with our existing system and we have cut dip usage by 50% and got better coverage. It is just that simple. We don't have to deal with getting excess foam and so the towels we use are better at drying faster. It has been a great addition to our use of the original Thrifty Dipper for post-dip application."

Aaron & Ron Kutz
Jefferson, WI
Kutz Dairy (Milking 1,400 cows)

90-cow New York dairy lowers SCC counts under 100,000 and sees 50%+ dip savings

"We've been using the Thrifty Dipper on our farm for over 4 years (first the Original and now the Thrifty 150). We like the way it works. It gives full teat coverage, no matter who is milking. Our SCC numbers are now below 100,000 (they had been as high as 250,000 before). We also are receiving more than 50% teat dip savings versus what we were doing before."

Woloszyn Dairy Farm

1,700-cow California dairy cuts dip usage in half and reduces SCC count by 55,000

"We started using the T150 Foamer in October. We instantly saw our dip usage go down by 50%. We decided to go with the JAH for our pre-dipping shortly after that. The milkers liked both products and found them easy to use. The biggest benefit we saw was our SCC dropping from about 200,000 to 145,000. We are very pleased with how these products are working here."

David Dykstra (and son Josh)
Oak Bend Dairy
Tulare, CA (Milking 1,700 cows)

The T150 Pro Foamer helps 1,700-cow Texas dairy cut dip usage by 40%

"I've been using the T150 Pro Foamer for about 10 months. I've cut my product usage by 40%. I had been using a foamer from a different company, but all of my friends were telling me that the Mastitis Management foamer was superior. I bought it and found out it really was a better foamer. It has a lot better coverage and is more sensitive, allowing me to have a greater ability to adjust it. One thing I really like is how it is constructed. It has less plastic and stands up better. I don't have to worry about it getting broken by the employees or the 1700 cows we milk. Dennis is great. He's always able to help whenever I have a question and he's very knowledgeable. I'd recommend his foamer to anyone."

Greg Mitchell
Pecos, TX
Trans Pecos Dairy (Milking 1,700 cows)

750-cow Texas dairy cuts dip usage by 70%

"We had been using the hand-held Thrifty Dipper for a couple years before and had enjoyed the dip savings that product brought. We started using the T150 Foamer the first of September. The results with the Foamer have been a bit hard to believe. We were going through 1 tote a month. We went 5 months with the Foamer. We use it for both pre and post-dip. In addition to the savings, our workers like the Foamer because it is easier to reach each teat, and the workers can see the teats better as they dip. There are other foamers out there (we've tried them), and they're not like this!"

Keith Broumley
Hico, TX
Broumley Dairy (Milking 750 cows)

5,000-cow California dairy upgrades to the T150 Pro Foamer and cuts dip usage by 50%!

"The T150 Pro Foamer paid for itself in less than 2 months! I purchased the T150 Pro Foamer after seeing it at World Ag Expo. I found it was easy to install. We tracked our teat dip usage before and after installation. We reduced our dip usage by over 50% and also had better coverage on the cows' teats!"

EJ DeJong
Hanford, CA
Wreden Ranch (Milking 5,000 cows)
